EDUCATION

Georgia Institute of Technology - Atlanta, GA

Aug 2016 – May 2020

B.S. in Computer Science

EXPERIENCE

Facebook – Menlo Park, CA

July 2020 – Present

Production Engineer – Network Infrastructure Security Engineering

- Developing and scaling full-stack in-house DDoS detection and mitigation systems spanning transport to application specific layers. Supporting efficient analytics and anomaly detection services across millions of hosts. Helping implement reliable novel detection methods; investigating metrics which aid in classifying attacks and network pathologies/regressions. (C++, Python)

Amazon Lab126 – Sunnyvale, CA

Sept – Nov 2019

Software Development Engineer Intern – Consumer Devices

- Designed a high performance, adaptive and portable service to stream and transcode sensor data from a prototype consumer electronic device. This service allowed developers to more quickly diagnose low-level sensor issues and decreased reliance on device storage for storing debugging information. (js, C++)

VMware – Palo Alto, CA

May – Aug 2019

Software Engineer Intern – VM Platform

- Designed and built a scalable, container-runtime independent solution for managing containers running in a Linux virtual machine. This solution efficiently gathers container stats/info by communicating directly with the exposed Linux kernel APIs which make containerization feasible. (C, Golang)

Prudential Financial – Newark, NJ

May – Aug 2018

Software Engineer Intern, Enterprise Services & Systems

- Improved reliability and efficiency of internal metadata management system, significantly reducing query response latency. Expanded on the existing frontend (JSP) and rewrote Struts2 functionality in Spring(Web).
- Reduced daily build time of this system by several hours with multi-module Maven build scripts that automate building Oracle ADF applications.

Georgia Tech Database Research Group – Atlanta, GA

Feb – May 2019

Undergraduate Researcher – Dr. Joy Arulraj – Accelerating Data Analytics using Logical Zone Maps

- Aided in designing new logical indexing structures used for caching statistical aggregates for subsets of data. Implemented mock dbms components such as a mixture model engine which would evaluate new indexing techniques as well as support approximate query processing. (C++)

College of Computing – Atlanta, GA

Jan – May 2019

Undergraduate Teaching Assistant – Design and Analysis of Operating Systems

- Taught students operating systems concepts and kernel programming. Graded and maintained assignments.

Institute for Information Security and Privacy - Georgia Tech

Oct 2017 – Oct 2018

Undergraduate Researcher – Dr. Taesoo Kim – Fuzzification: Anti-Fuzzing Techniques

- Designed and evaluated anti-fuzzing techniques to slow down modern fuzzers and protect software from malicious fuzzing.
- Wrote LLVM passes in C++ to implement anti-fuzzing techniques in existing Linux executables.
- Automated source-code instrumentation, unit testing of anti-fuzzing methods and visualization of fuzzing stats.

PROJECTS, PUBLICATIONS

- Jinho Jung, Hong Hu, **David Solodukhin**, Daniel Pagan, Kyu Hyung Lee, and Taesoo Kim. **Fuzzification: Anti-Fuzzing Techniques**. In *Proceedings of the 28th USENIX Security Symposium (Security 2019)*, Santa Clara, CA, August 2019.
- **Linux Kernel Modules** (kernel v4.15.18): Developed a module which starts a kernel daemon for transmitting O.S. stats. Implemented a kernel module for network traffic artificial throttling and proxy. (C)
- **Wolfram Alpha Bug**: Found SSRF vulnerability in Wolfram Alpha's api giving access to premium features for free. Contacted WA team and exploit was patched.

SKILLS

Languages: C++, C, Python, Java, Golang, (PL)SQL, Javascript, x86/64 ISA (GAS, FASM)

Systems, Technologies/Tools: LLVM, OpenMP, MPI, Docker, Kubernetes, libcontainer, KVM/QEMU, libvirt, Android SDK/NDK, Git, Reverse Engineering, fuzzing, SDDC, HCI, AWS:LightSail/EC2, Virtualization

Foreign Language: Russian; Native Fluency
